

SEO Audit — Origin Tours & Travels

https://origintoursandtravels.com · Local travel agency (Hyderabad, India) — Umrah/Hajj, tours, visas, attestation
Audit date: 2026-05-29 · YMYL: Yes (money + safety) · Method: 6-specialist parallel audit (source + live fetch)

SEO Health Score

59
OUT OF
100

Solid technical/on-page foundation (canonicals, per-service pages, geo-modified metadata, valid TravelAgency/Organization/FAQPage schema) undermined by three compounding problems: **unverifiable trust signals on a YMYL site, client-rendered / thin commercial content, and structural gaps that suppress rich results and AI citation.**

Category	Weight	Score	Weighted
Technical SEO	22%	68	14.96
Content Quality (E-E-A-T)	23%	61	14.03
On-Page SEO	20%	58	11.60
Schema / Structured Data	10%	65	6.50
Performance (CWV)	10%	50	5.00
AI Search Readiness	10%	42	4.20
Images	5%	60	3.00
Total			≈ 59

Reconciliation note: The GEO crawl reported "no structured data" — a false negative from live-HTML markdown stripping. Source review confirms JSON-LD *does exist* (layout.tsx, hajj/page.jsx). The real schema problems are *quality* gaps (wrong types, missing aggregateRating, partial breadcrumbs), not absence.

Critical Findings

Fix now

C-1 · Hardcoded, unverifiable testimonials + "10K+ / 4.9★ / 99% success" claims

All 22 reviews are static JSX (no dates, profile links, or platform attribution); headline stats have no methodology. On a YMYL site handling ₹85k–₹5L transactions, unverifiable social proof is the strongest negative trust signal under the Sept 2025 QRG.

Falsify: open the GBP listing (CID 0x94ba7b774d9fdb9) — if Google shows <50 reviews, the "10K+" claim is a credibility gap. **Monitor:** weekly Google review count (target ≥3/week).

C-2 · IATA / TAAI / Hajj-operator credentials are text-only

No badge images, membership numbers, or link to the IATA public agency directory — for the exact credentials that justify the purchase.

Falsify: no official-issuer or verification <a> on /about. **Monitor:** "Accreditation" attribute appearing in the brand Knowledge Panel.

C-3 · No legal pages (Privacy / Terms / Cancellation-Refund)

The site collects names, phones, emails and financial inquiries via /api/inquiries with no policy pages — a hard QRG failure and a DPDPA compliance gap in India.

Fix: create the three pages, link in footer. Binary check.

High Findings

~1 week / this sprint

H-1 · Commercial content is client-rendered / thin

Tour & visa *detail* pages fetch body content in useEffect (skeleton on first paint); *listing* pages are filter grids whose only crawlable prose is a collapsed FAQ (<100 words). Filter state (?country=Dubai) isn't a crawlable URL, and there are no per-country / per-destination hub pages.

Falsify: curl -A Googlebot /visas — if pricing isn't in the HTML, content is JS-gated. **Monitor:** GSC "Crawled/Discovered – currently not indexed" for /tours/*, /visas/*.

H-2 · No aggregateRating schema anywhere

No star ratings in local pack or organic snippets (a 15–25% CTR handicap at equal rank). Depends on C-1 (need real review data first).

H-3 · Schema type misuse: Product on tours & visas

Should be TouristTrip (tours) and Service/GovernmentService (visa/attestation). Product forfeits travel-rich-result eligibility.

H-4 · Performance — LCP & TBT likely failing on mobile

HeroSlideCarousel is `dynamic(..., {ssr:false})` (hero absent from SSR → est. LCP 3.5–5.5s); the `cobe/three.js` Globe (28k mapSamples, main-thread WebGL) drives est. TBT 400–900ms / INP 200–400ms. R3F/drei (~200KB) may bleed into public chunks.

Highest-ROI single change: remove `ssr:false` on HeroSlideCarousel (Swiper 11 is SSR-safe). **Monitor:** CrUX p75 LCP/INP; Lighthouse LCP-element + TBT in CI.

H-5 · Anonymous blog authorship + near-empty blog

`authorId` is nullable, falls back to site name; the live blog has one post with body "Hello" — yet sits at sitemap priority 0.9. YMYL blog content needs a credentialed human author.

H-6 · /attestations page-type mismatch (lowest SXO score, 33/100)

A compliance/process query served as a card grid. The correct HRD → MEA → Embassy → MOFA process + per-document timelines exist only inside a collapsed FAQ.

H-7 · No Tier-1 India citations

No JustDial, Sulekha, IndiaMART, or TripAdvisor presence; the GBP URL isn't in sameAs. Table stakes for Hyderabad local search.

H-8 · `llms.txt` absent

Zero-code static file; the cheapest AI-visibility win (Perplexity especially).

Medium Findings within a month

- **M-1** Stock Unsplash "team" headshots — rater-detectable; replace with real staff.
- **M-2** Maps embed uses a text *query* not the Place ID (fragile; CID already in code).
- **M-3** `BreadcrumbList` only on `/hajj` — replicate to `umrah/visas/attestations/tours` (30-min win).
- **M-4** No `LocalBusiness/TravelAgency` JSON-LD on `/contact` (most NAP-dense page) — add with `hasMap`, `hours`, `aggregateRating`.
- **M-5** Geo precision 3–4 decimals (~100m error) → use 5 (17.39489, 78.45882); add `Sunday: Closed`.
- **M-6** City-intent only in (ignored) keywords meta, not in H1/H2 — put "in/from Hyderabad" into visible headings.

- **M-7** Umrah page: duplicate FAQ + duplicate gallery images + stale "RT-PCR required?" FAQ; no Economy/Standard/Premium comparison table.
- **M-8** FAQ answers too short for AI citation (18–40 words; target 134–167) — expand strongest ones.
- **M-9** No contextual cross-service internal links (attestation ↔ visa, umrah ↔ hajj ↔ air-ticketing).
- **M-10** Unsubstantiated "99% / 10K+" — add date-qualified, methodology-backed versions.

Low Findings backlog

- Phone format inconsistent across schema / text / tel: — normalize to E.164 + one human format.
- Logo in schema points to the 1200×630 OG image — needs a square ≥112px logo (suppresses Knowledge Panel logo).
- Sitemap: all lastmod identical (build time), detail/blog URLs absent, /contact priority 0.5 — drive lastmod from Prisma updatedAt and add detail URLs.
- Global authors metadata = brand name (compounds H-5).
- "Humayun Nagar Rd" vs "Road" street-name inconsistency.

Prioritized Action Plan (dependency-sequenced)

Wave 1 — This week (trust + quick wins, mostly no-code/content)

1. Create Privacy / Terms / Cancellation pages + footer links (C-3).
2. Add verifiable IATA/TAAI numbers + official badges + directory link on /about (C-2).
3. Add "Review us on Google" CTA (footer, /contact, post-inquiry email) → starts review velocity, unblocks C-1/H-2 (C-1).
4. Publish /llms.txt (H-8); add BreadcrumbList to four service pages (M-3); replace RT-PCR FAQ + de-dupe Umrah FAQ/gallery (M-7).

Wave 2 — Sprint (code, high ROI)

5. Remove `ssr:false` on `HeroSlideCarousel`; lazy-load `Globe` behind `IntersectionObserver` + drop `mapSamples`; verify R3F not in public chunks (H-4).
6. SSR-pass tour/visa body content from the server component instead of `useEffect` (H-1a).
7. Migrate `Product` → `TouristTrip/Service`; add `aggregateRating` (real GBP data) + `/contact LocalBusiness JSON-LD` (H-3, H-2, M-4).
8. Restructure `/attestations` with a static process block above the grid (H-6).

Wave 3 — This month (architecture + authority)

9. Build crawlable hub pages: /visas/dubai, /visas/schengen, /tours/kerala-packages... with real checklists/itineraries + cross-service links (*H-1b, M-9*).
10. Claim/complete GBP (categories, photos, services, Q&A); build JustDial/Sulekha/IndiaMART/TripAdvisor citations, add all to sameAs (*H-7*).
11. Populate blog with credentialed-author YMYL articles; add author bios; fix authorId fallback (*H-5*).

Limitations

No live PageSpeed/CrUX, GSC, or GBP-API data was available (Bash/API access was sandboxed for subagents), so CWV figures are **code-based estimates**, SERP/SXO reconstructions are **knowledge-based**, and live review counts / citation status need verification. Validate Wave-2 performance claims with a real Lighthouse/CrUX run and confirm the GBP review gap before publishing any aggregateRating.
