

SEO Audit Report

Origin Tours & Travels — Hyderabad travel agency (Umrah/Hajj, holidays, visas, attestation)

Site: origintoursandtravels.com · Audit date: 29 May 2026 · Method: 10 parallel specialists + live verification

Overall SEO Health Score

Good foundation — content depth & trust signals are the ceiling.

The site is technically ahead of most Indian travel-agency sites: clean server-side rendering, a valid dynamic sitemap/robots, strong security headers, correct `TravelAgency / TouristTrip` schema, and a genuinely good `llms.txt`. The score is held back by thin listing-page content, unverifiable trust claims, and a broken share/logo image.

CATEGORY	WEIGHT	SCORE
Content Quality	23%	62
Technical SEO	22%	78
On-Page SEO	20%	72
Schema / Structured Data	10%	75
Performance (CWV)*	10%	65
AI Search Readiness	10%	62
Images	5%	55

* Performance is an **estimate** — no CrUX/PageSpeed key was available, so no field data was measured. Backlinks were also basic-tier only (no Moz/Bing key).

Verified against the live site. Several specialists analysed the local codebase, which is *behind production*. These stale/incorrect findings were corrected and should **not** be actioned:

- “Homepage has no H1” — false; the live homepage has one keyword-rich H1.
- “/about is full client-side render” — false; /about is server-rendered in production.
- “/visas shows the attestation H1” — false positive; live H1 is correct.
- “4 service pages missing from sitemap” — stale; production `sitemap.xml` already includes /hajj , /air-ticketing , /hotel-booking , /transport .
- “Add HowTo schema” — rejected: HowTo rich results were deprecated (Sept 2023).
- **FAQPage** won't earn Google rich results for a commercial site (Aug 2023 restriction) — do it for *LLM/AI citation*, not Google snippets.

Critical — fix immediately

CRITICAL C1 · OG / logo image returns 404 sitewide

/og-default.jpg returns **HTTP 404**, yet it is referenced by `og:image` , `twitter:image` , and the schema `Organization / TravelAgency` `logo` . Every social share, WhatsApp preview and AI link card renders imageless, and the Knowledge Panel logo is broken.

Fix: add a real 1200×630 `og-default.jpg` to /public , plus a separate square logo for schema `logo` as an `ImageObject` .

Why it ranks here: a referenced asset 404s, degrading every external preview surface. | **Failure check:** `curl -I /og-default.jpg` $\neq$ 200. | **Leading indicator:** link previews show an image in WhatsApp/X.

CRITICAL C2 · Fabricated testimonials & unverifiable stats (YMYL trust)

13–22 hardcoded testimonials (initials only, no dates/source) plus a visible “4.9 rating” and “99% visa success rate” with no backing. For pilgrimage/visa (financial-decision) content, the Sept 2025 Quality Rater Guidelines treat this as deceptive.

Fix: replace with real Google Business Profile reviews (Places API or embed); add a methodology footnote to — or remove — the 99% claim.

Flagged by: content + local + SXO. | **Failure check:** any on-page rating still lacks a verifiable source.

CRITICAL C3 · Verify GBP primary category & start review velocity

GBP exists (CID confirmed in schema). Primary category is the single highest local-ranking factor and can't be read from code.

Fix: confirm primary = "Travel Agency"; add "Tour Operator" and "Visa & Passport Service" secondaries. Launch a WhatsApp post-service review request (≥ 1 new review/week to beat the ~18-day decay cliff). Then wire the *already-built* `aggregateRatingJsonLd()` helper with real data.

Unblocks: AggregateRating rich snippet (depends on real review data). | **Leading indicator:** net-new Google reviews > 0 / month.

● High — within 1 week

HIGH H1 · Thin listing pages can't rank for high-volume terms

`/tours` and `/visas` are ~200–350 words of filter chrome + a card grid. Add a **server-rendered** 250–400-word editorial block, plus a 140–160-word question-led answer section (e.g. "How much do holiday packages from Hyderabad cost?") *above* the grid. Must sit in the server component, not inside `*Client.jsx`.

Agreement: content + SXO + GEO — the biggest ranking ceiling on the site.

HIGH H2 · Rebuild `/hajj` as an informational-hybrid guide

Hajj 2026 SERPs reward guides (govt vs private quota, cost-by-category, documents checklist), not a service pitch. Add `FAQPage` JSON-LD (for LLM citation) and a `TouristTrip` with itinerary.

Flagged by: SXO — highest-potential keyword where structure alone could move ranking 10+ places.

HIGH H3 · Add verifiable credentials + a named team to `/about`

Add IATA agent code, TAAI membership number, Hajj-operator registration number, and 3–4 named consultants with roles/experience. Single biggest E-E-A-T lever.

Flagged by: content + SXO. | **Strengthens:** H1/H2 content rewrites.

HIGH H4 · Schema correctness fixes (`src/app/layout.tsx`)

- `sameAs` URLs are missing the `https://www.` scheme → breaks entity reconciliation / Knowledge Panel.
- Sunday `openingHoursSpecification` of `00:00–00:00` parses as “open 24h” → remove the Sunday entry.
- Duplicate `FAQPage` on the homepage (`FAQSection` + `FaqAccordion` both emit) → keep one.
- `logo` should become an `ImageObject` (after C1).

Flagged by: schema + GEO.

HIGH H5 · Sitemap hygiene (`src/app/sitemap.ts`)

Static routes use `lastModified: now`, so every URL looks “just updated” on every crawl — Google then distrusts `lastmod` sitewide. Use real per-route dates; drop `changefreq` and `priority` (Google ignores both). Dynamic routes already use real `updatedAt` — leave them.

Flagged by: sitemap.

HIGH H6 · Migrate email to the matching domain

`sales@origingroups.com` ≠ your website domain → fragments NAP/trust for directory validators. Move to `sales@origintoursandtravels.com` across site, schema, GBP and citations.

Flagged by: local.

● Medium — within 1 month

MEDIUM Conversion content on service pages

`/umrah` : pricing tier table (Economy/Standard/Premium + Haram distance) and next 3 group departure dates. `/attestations` : per-document fee ranges + explicit “Express: 3–5 days” SLA. (SXO)

MEDIUM Schema additions

Add `ContactPage` + `AboutPage` nodes, `foundingDate: "2010"`, and `TouristTrip.duration`. (schema)

MEDIUM Start a blog / guides hub

Priority articles: “Umrah from Hyderabad 2026 guide”, “Govt vs private Hajj packages”, “Schengen documents checklist”, “Attestation vs apostille”. Each internally links to the transactional pages and builds topical authority. (S XO, GEO)

MEDIUM Build core local citations

Exact-NAP listings on Justdial, Sulekha, IndiaMart, IATA Agent Finder, TAAI directory, TripAdvisor. (local, backlinks)

MEDIUM AI-crawler & llms.txt enhancements

Add explicit `robots.txt` allow-rules for GPTBot / ClaudeBot / PerplexityBot / Google-Extended and an `X-Robots-Tag: max-snippet:-1, max-image-preview:large` header. Extend the (already strong) `llms.txt` with Blog, Topics, License, Last-Updated. (GEO)

MEDIUM Fix `/umrah` gallery

Descriptive alt text (“Pilgrims performing tawaf at Masjid al-Haram”) and remove the duplicated gallery image. (S XO, images)

Low — backlog

- Add a `Content-Security-Policy` header; suppress `x-powered-by: Next.js`. (technical)
- Add LinkedIn to `sameAs` and create a **Wikidata** entity (founded 2010, Hyderabad, IATA) — an entity anchor for ChatGPT/Perplexity. (GEO)
- Measure CWV with real data: add a `GOOGLE_API_KEY` and re-run `/seo google` (field) or `/seo technical` (Lighthouse). The animated Globe (three.js) + Framer Motion are mobile LCP/INP risks. (performance)

Dependency sequencing

Do first (cheapest, code-only, no content): C1 (image asset, minutes) → unblocks H4’s `Logo` `ImageObject`; H4 + H5 are pure code edits.

Then: C3 (real GBP reviews) → unblocks wiring the existing `aggregateRatingJsonLd()` helper in `src/lib/service-jsonld.ts`.

Then content: H3 (credentials) strengthens H1 (tours/visas rewrite) and H2 (hajj guide).

Strengths worth keeping: clean SSR across homepage / about / tour-detail; correct `TravelAgency` + `TouristTrip` + `BreadcrumbList` schema; valid dynamic `sitemap.xml` + `robots.txt` ; HSTS-preload and a full set of security headers; a genuinely strong `llms.txt` ; and excellent certificate-attestation process content.
